

Introduction

IntegritSystem (M) Sdn Bhd is a private company limited by share, incorporated in Malaysia in 1996. Its main business activity is computer System Integration with focuses mainly in the fast progressing Internet and Broadband areas. Other areas on interest include the 2D/3D animation, high-end computing, software development and electronic devices. Over the years we have serviced numerous of well-known companies locally and abroad. And the list grows as demand for Internet software and commerce transaction rise. We hope to provide the latest and even more exciting solution experiences to our new prospective customers.

Missions & Objectives

Our company mission is to provide Malaysia and its region with the latest computer & networking technology available to improve our clients efficiency and productivity. In the same time, our company is also improving the current technology and made customisation on our own to suit our customers' needs and requirements. To achieve that, we have our own R&D facility to further develop the existing technologies and market the end-products with our own brand names.

General Business Model

Hardware Vendor

We are the authorized reseller for major computer systems in Malaysia. We also distribute and resell other well-known networking hardware, cards, standalone devices and peripherals.

Software Reseller

We resell software on UNIX and NT, which is not represented in Malaysia.

Software Developer

Other than integrating the off-the-shelf software packages, we also develop our own codes and application software to work and interact with other software systems.

Partner for Total System Integration

In areas that require quite a number of hardware and software installations, network design, content creation and software development, we are able to integrate and commission the entire setup.

Core Business Model and Differentiation

Live & Archived Media Streaming/Conferencing

As the Malaysian masses aware of the potential of media streaming, we see more and more local events being broadcasted live on the Internet. The potential of audience coverage and reach has made us realise that Internet media streaming is the next medium for mass-communication.

The ever-growing market of for this are Distance Learning, Online Training, Corporate Communication, convergence on TV and PC markets for household/business, Media Commerce, Media Sharing/Exchange, Video-on-Demand, News-on-Demand and many emerging on-demand services.

Internet Media Hosting, Commerce & Exchange

Further from webcasting a live event, local content creator & developer are now able to host their archived (digitized/recorded) media clips with our hosting partner, Telekom Malaysia's Netmyne (<http://www.netmyne.com>). Here we can share clips with the whole wide world or selective groups of people like students, departments, corporate customers, prospective clients and many more.

For commercially valued clips, we can customised and configure media files with encryption to protect the copyright and ownership of the media. Further we can package and license these media through a licensing server and package using Realnetworks Media Commerce Suite.

And we are here, ready to execute your media streaming application needs.
